Activity 04: C-Footprint Calculator

Subject: E-Waste Management (INFT)

Student: Shreesh Khamkar | Roll No: 24101B0026 | Class: INFT-B

Embodied Carbon and Electronics Footprint Audit:

Evaluation of greenhouse gas emissions generated during hardware manufacturing vs. usage.

- Smartphone Embodied Carbon: Approx. 70-80% of total lifecycle emissions occur during production.
- Laptop Lifecycle: 250-350 kg CO2-equivalent emitted before first power-on.
- Conclusion: Extending device utilization by 2 years reduces annual footprint by over 30%.
